

○ STREAM CONNECTOR

A Brilliant Path to Modern Video.

Completely overhauling a surveillance system is a big lift. Not every organization can replace every camera overnight. Budget cycles, legacy hardware, and mixed-manufacturer environments often make a full refresh unrealistic. Stream Connector integrates compatible third-party RTSP cameras into the Y6OS platform today, providing immediate visibility while supporting a phased transition to full direct-to-cloud deployment with supported AXIS devices.

The Challenges.

Most organizations have years of camera installs and upgrades. Different brands, aging equipment, and phased budgets can make modernization difficult.

- Mixed use of camera manufacturers
- Budget cycles that delay full hardware replacement
- RFP requirements for multi-manufacturer compatibility
- Takeover projects involving third-party cameras

The Stream is the Solution.

Stream Connector provides a simply brilliant migration path allowing organizations to immediately integrate the Y6OS platform giving them time to plan future, complete installs.

Integrate compatible third-party RTSP cameras into the Y6OS platform

View live video streams in the Y6OS Matrix

Record footage locally on AXIS S30 Series Recorders

Ingest third-party video streams alongside native AXIS devices

Maintain a clear migration path to full direct-to-cloud architecture

Managed Services on the AXIS S30 Series Recorders

A Simpler Way to Migrate.

Stream Connector provides a practical way to bring existing cameras into the Y6OS platform. Here's how a typical deployment comes together.

Expand your Visibility and Your Vision.

Once connected, businesses can reap the benefits Stream Connect and the cloud-based Y6OS solution offers, giving you time to plan future migrations and upgrades.

Third-party Camera Visibility

Bring compatible RTSP cameras into the Y6OS environment.

Live Video in Y6OS Matrix

View third-party camera streams alongside direct-to-cloud devices.

Local Recording with AXIS S30 Series

Store video locally and view live recorded video in Y6OS.

Flexible Discovery and Configuration

Automatically discover ONVIF cameras or configure streams manually via RTSP.

Forensic Video Access

Retrieve recorded footage through the Y6OS timeline interface.

Step Up to the Cloud, Today.

Stream Connector allows organizations to adopt the Y6OS platform today, without forcing immediate infrastructure replacement. When the time is right, transitioning to supported AXIS direct-to-cloud cameras unlocks the full performance, scalability, and feature advantages of a native cloud architecture.
