

○ YOURSIX SENSORS

See What Cameras Can't.

Security is more than an eye in the sky. Many of the threats inside a facility start with points of data cameras can't detect such as rising temperatures, poor air quality, power fluctuations, or equipment stress. With sensor integration in our Y6OS platform, environmental and operational data becomes part of the same cloud platform that manages your video, access control, and audio systems, giving you a clearer, more complete view of what's happening across the entire facility.

Business Challenges

Modern businesses rely on dozens of connected systems to run their facilities. This creates many operational challenges, and opens the door to security risks.

- Siloed monitoring across various system controls
- Multiple platforms and dashboards to manage
- Increased on-prem hardware complexity
- Limited ability to correlate conditions with security events

YourSix Sensor Solution

The Y6OS platform gives you the control and seamless integration your business demands.

Applied Intelligence

Sensor monitoring with the Y6OS platform can seamlessly provide you with all of the data needed to investigate, react, and protect.

Get the Full Picture.

Sensor solutions go beyond video. You get the complete situational view of a variety of environmental and systems information.

Air Quality Monitoring

Track temperature, humidity, and CO₂ levels to maintain safe and sustainable environments.

Vape Detection

PM2.5 sensors detect vaping activity in real-time and can be correlated with access control or presence detection.

Solar & Energy Systems

Monitor battery levels, charging currents, and overall power utilization across solar and energy systems.

External System Integration

Bring data from SCADA systems, PLCs, connectivity routers, power meters, and other operational systems.

One protocol. Unlimited Flexibility.

In addition to Modbus RTU supported sensors, including native devices like the AXIS D63 series, Y6OS integrates seamlessly with a wide array of sensor options for endless possibilities.
